

Week1:-

1. Write a Python program to display the current date and time.
2. Write a Python program that accepts the user's first and last name and prints them in reverse order with a space between them.
3. Write a Python program that accepts an integer (n) and computes the value of $n+nn+nnn$.
Sample value of n is 5
Expected Result : 615
4. Write a Python program to calculate the sum of three given numbers. If the values are equal, return three times their sum.
5. Write a Python program to solve $(x + y) * (x + y)$.
Test Data : x = 4, y = 3
Expected Output : $(4 + 3) ^ 2 = 49$
6. Write a Python program to compute the future value of a specified principal amount, rate of interest, and number of years.
Test Data : amt = 10000, int = 3.5, years = 7
Expected Output : 12722.79
7. Write a Python program to parse a string to float or integer.
8. Write a Python program to sum the first n positive integers.
9. Write a Python program to calculate sum of digits of a number.
10. Write a Python program to get the ASCII value of a character.
11. Write a Python program to check whether a string is numeric.
12. Print a rectangle Pattern with 5 rows and 3 columns of stars.
13. Write a program which will find all such numbers which are divisible by 7 but are not a multiple of 5, between 2000 and 3200 (both included).
14. Write a program that calculates and prints the value according to the given formula:

$$Q = \text{Square root of } [(2 * C * D)/H]$$

Following are the fixed values of C and H:

C is 50. H is 30. D is the variable whose values should be input to your program in a comma-separated sequence.

Example

Let us assume the following comma separated input sequence is given to the program:

100,150,180

The output of the program should be: 18,22,24

Hints:

If the output received is in decimal form, it should be rounded off to its nearest value (for example, if the output received is 26.0, it should be printed as 26)

In case of input data being supplied to the question, it should be assumed to be a console input.

15. Write a program to print a right angle triangle with alphabets.(instead of '*', Alphabet).

Hint: How to do it for

**

*
